SUMMARY

Frontend developer with 4+ years at Tata Consultancy Services. Started on Sitecore-based enterprise websites and now lead a three-person UI team building internal PIM tools and AI chatbots, including the tool that writes product titles and descriptions for Croma. Mostly React, along with API integration, prompt work, and checking AI output before it reaches users.

SKILLS

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, jQuery, PrimeReact, responsive and accessible UI, cross-browser testing

Backend & Cloud: REST APIs, Node.js, FastAPI, Azure Blob Storage, Azure Cosmos DB

AI: Generative AI, prompt engineering, LLM output evaluation, AI chatbots, CrewAI

CMS: Sitecore

Testing & Tools: Jest, React Testing Library, Git/GitHub, code reviews, Figma, Agile/Scrum

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS), Hyderabad

Feb 2022 – Present

Senior Frontend Developer – Internal AI Projects

Jun 2025 – Present

Product Information Management (PIM), Croma content tools, AI chatbots

- Lead a UI team of three on PIM and chatbot projects: plan sprint work, review pull requests, and own frontend delivery.
- Built the frontend for a PIM tool that generates product titles and descriptions for the Croma catalogue.
- Wrote and tuned the prompts behind that copy, and checked generated text against product specs before release.
- Built reusable React components shared across internal PIM screens and wired them to product and AI-content APIs.
- Compared models against project requirements before the chatbot build and documented where each one fell short.
- Write validation test cases and work through UI and integration bugs with QA and backend developers.
- Use AI coding tools to speed up routine work; every generated change is reviewed and tested against team coding standards.

Frontend Developer – Enterprise CMS Websites

Jun 2023 – May 2025

- Built website pages from Figma designs on Sitecore, using templates and drag-and-drop components to match layout and spacing.
- Wrote custom CSS, JavaScript, and jQuery where stock components couldn't handle the design or interactions.
- Connected CMS-managed content and APIs so content teams could update text and images without developer help.
- Improved page speed and Core Web Vitals with lazy-loaded images and video, image compression, minification, and browser caching.
- Kept pages responsive, accessible, and consistent across browsers; worked in Agile sprints with Git feature branches and code reviews.

Trainee – Frontend Development

Feb 2022 – May 2023

- Completed TCS training in web development (HTML, CSS, JavaScript, React) before the first client assignment.
- Built practice projects with React components, hooks, and context.

PROJECTS

Virtual Try-On (VTON) – Personal Project

- Own idea: upload a person photo and a garment image, and the app generates an image of the person wearing that garment.
- Built the React upload-and-preview flow and connected it to a generative image model for the try-on output.

Tech News Platform – React

- Combines articles from a custom API and the DEV.to API into one feed, with skeleton loaders and responsive card layouts.

EDUCATION

B.Tech, Electrical and Electronics Engineering

Jul 2016 – Nov 2020

West Godavari Institute of Science and Engineering, Nallajerla | Aggregate: 71%
